White Listing Send Word Now SENS System

From time to time, Send Word Now (SWN) adds/updates their email servers to optimize service delivery. Some customers need this updated information to ensure that they properly white list SWN. This prevents SWN email alerts from being improperly interpreted as spam. Please ensure that the following IP ranges have been white listed within your organization.

The current ranges are:

74.217.49.0/25 74.202.83.0/25
69.25.227.128/25
64.254.149.192/27
68.71.202.48/28
70.42.26.104/29
70.42.29.32/27

All of SWN SMTP traffic flows out of domain sendwordnow.com, although it's possible to see traffic from any of the following sub domains. Please note that sendwordnow.net is the online production environment (customers use it while accessing the service itself). While there are no plans for you to see SMTP traffic from it at present, you may also wish to white list that domain.

sendwordnow.com
sendwordnow.net
sendwordnow.ca

Thank you.
